**LPD-250A
Aluminum 17 lbs**

The LPD-250 and Aluminum LPD-250A Diffusers

- Neutralize chlorine/chloramines safely when flushing
- Keep chemical waste to a minimum, by using tablets there are no chemicals to mix
- Attach the LPD-250 directly to hydrant or connect it to a hose and flush to the street using the LPD-250 Tire Bracket or Swivel Hitch Bracket

LPD-250 Dechlorinating Diffusers Overview

Already widely used throughout the United States and Canada, the LPD-250 is the easiest to use dechlorination device available. Simply fill the feed tube with tablets and the LPD-250 will do the rest. There are no chemicals to mix or waste.

The LPD-250 is for use with chemically treated (4 ppm or less chlorine/chloramines) potable water. For higher chlorine concentrations up to 300 ppm, see www.pollardwater.com for the COMBO Kit which works with the LPD-250 and gravity feeds liquid CAPTOR NSF into the LPD-250. The LPD-250 uses either LPD-CHLOR™ tablets (contains Sodium Sulfite 81.3%) or Vita-D-Chlor™ Tablets (Ascorbic Acid- Vitamin C) that neutralizes the chlorine/chloramines in the water you are flushing.

Weighing 33 lbs., the LPD-250 is heavy enough to take the day-to-day abuse of flushing. You can flush straight off a hydrant or attach a hose to point the flow where you want it to go. A lightweight Aluminum Version (LPD-250ALUM) is available and weighs in at 17 lbs.

The LPD-250 can handle flows from 200 to 1,250 GPM and hydrant pressures up to 200 psi. For flows lower than 200 gpm, we recommend you use our Low Flow Inserts which allow more water to run past the tablets, great for applications such as draining/dechlorinating a swimming pool.

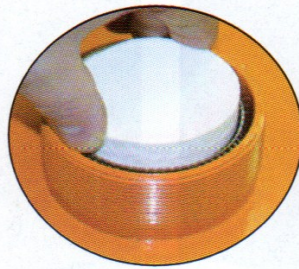

For flows higher than 1250 GPM we recommend a hydrant wye or you can use our Manifold Systems (call for details).
